Should have more info later today. Plume is expected to reach the Susquehanna overnight.

Cecil, just got off the phone with Greg. PADEP has asked that we take on sampling some private wells in the area. Greg estimates maybe 20-30 right now. We'd look for arsenic, lead and cadmium as hazardous substances and use total organic carbon, nitrates and nitrites as indicators. As stated in PADEP's fact sheet, properly constructed wells shouldn't have a problem, but they've gotten a number of calls.

Greg can update us at the 5:00 call.
